Notice that all Latitude and Longitude metadata found in the EXIF of many of the photos (particularly those of stamps) confirm the same general location:

Appendix C: WiFi and GPS Location Information

GPS data can be found within the phone's navigation application, particularly within the following directory:

- /vol_vol5/mobile/Library/Maps

Here, you can find a file named **History.plist** containing the following information. As it is an Apple property list format, a tool was installed via the Kali Linux repository (plistutil) to allow viewing the data in an XML format. Note the latitude and longitude, which match the stamp location from the image EXIF data:

```

Additionally, the user's network preferences have been saved on the device, and the same method used to extract the GPS information above can be used to extract network data from **/vol_vo1/mobile/Library/Preferences/com.apple.preferences.network.plist**:

No idea why this is pretty much empty -- wrong preferences file?
